

REPLY Day & Night Cream is a premium formulation that hydrates and nourishes your skin all day and night. By using a base of shea butter, this cosmetic can promote a healthy complexion and support overall skin health. The combination of a Day & Night Cream offers protection against the environmental stressors that your face experiences during the day while helping the skin recover and rejuvenate during your restorative nighttime routine.

How is REPLY Day & Night Cream Unique?

- Utilizes barley seed extract to soothe and nourish sensitive skin
- Relaxes facial muscles to reduce fine lines and wrinkles
- Protects during the day and rejuvenates at night

Day & Night Cream

REPLY Day & Night Cream combines the beneficial properties of both a day and night cream in a single formulation. As a combination cream, it provides multiple benefits in a simple one-step product that keeps your skincare routine convenient.

When used in the morning as a day cream, the formulation provides antioxidants to help protect the skin from environmental stressors. This minimizes oxidative stress to the skin. The cream is designed to be lightweight and easily absorbed while still being rich and deeply hydrating, making it suitable as a base for makeup application. Your skin will feel hydrated without a heavy or greasy residue on the skin.

When used in the evening as a night cream, the formulation has a rich texture that helps to moisturize and replenish skin overnight, when the skin's repair processes are most active. As a night cream, it also helps to accelerate skin cell turnover and the renewal process, promoting a smoother and more radiant complexion.

If additional hydration is required for your skin type, we recommend applying several mists of our Essence/Toner instead of applying additional Day & Night Cream. This will create a great hydrating base for the Day & Night Cream, optimizing the absorption of its moisturizing nature while making each jar last as long as possible.

Barley Seed Extract (*Hordeum vulgare*)

Barley seed extract has demonstrated the ability to influence gene expression related to soothing, revitalizing and repairing sensitive skin. Gene expression is the process by which information found within genes is used to create functional products such as proteins or RNA molecules.

Key Benefits and Features

- Seals in moisture without leaving skin with an oily appearance
- Boosts collagen synthesis
- Brightens skin and fades dark spots
- Improves skin hydration
- Maintains the skin's natural moisture barrier
- Reduces the expression of fine lines and wrinkles
- Tightens skin

It specifically targets genes involved in the inflammatory cascade, stress response, repair mechanisms and barrier function.

Shea Butter (*Butyrospermum parkii*)

Shea butter is high in oleic and stearic fatty acids, both of which help to lock moisture in the skin and prevent dryness. These fatty acids function as a protective barrier on the surface of the skin to shield it from harsh environmental aggressors. Shea butter is also high in vitamins A and E, which aid in nourishing and replenishing the skin. These vitamins also have antioxidant properties that help to protect the skin from free radical damage. Regular application of shea butter can help improve the appearance of fine lines and age spots while promoting youthful-looking skin.

Gotu Kola Extract (*Centella asiatica*)

Gotu kola has soothing and inflammatory-fighting properties that can calm and reduce redness and irritation that our skin may experience daily. This botanical also contains triterpenoids such as asiaticoside, madecassoside, and aspartic acid, which can repair skin and support the regeneration process. This in turn stimulates collagen production and improves skin elasticity. These triterpenoids also function as antioxidants to reduce the oxidative stress and damage that causes premature aging of the skin. This can also help to regulate sebum production, thereby assisting in controlling excess oil on the skin, which helps to address acne-prone or oily skin concerns.

Saccharomyces Ferment Filtrate —

Saccharomyces ferment filtrate is an extract from fermented yeast (*Saccharomyces cerevisiae*), containing amino acids, peptides and many other nutrients that provide deep hydration and moisture retention in the skin. The amino acids and peptides support healthy aging by stimulating cellular renewal and boosting collagen synthesis.

Wasabi Root Extract (*Wasabia japonica*) —

Wasabi root extract contains antioxidants that include isothiocyanates, which assist in protecting the skin from oxidative stress caused by free radicals. This ingredient also has a soothing effect that alleviates skin irritation and redness for those with sensitive or reactive skin, providing a refreshing and awakening effect to invigorate and revitalize skin. Wasabi root extract also has the potential to brighten skin to help improve the appearance of dull or uneven skin tone.

Ceramide NP —

Ceramide NP is a lipid molecule found in the outermost layer of the skin. This naturally occurring fat maintains the skin barrier and hydration. NP refers to a 'normal fatty acid' and 'phytosphingosine base'. Phytosphingosine base is a naturally occurring plant-based sphingolipid (class of lipids) that plays important roles in cell signaling and membrane structure.

As we age, the natural production of ceramides in the skin decreases, which leads to a weak skin barrier and increased moisture loss. Replenishing levels of ceramides in the skin depleted by aging and environmental stressors helps prevent moisture loss, enhance hydration and protect the skin from other irritants.

Acetyl Hexapeptide-8 —

Acetyl hexapeptide-8 is comprised of six amino acids that relax muscle contractions when applied to the face, an action that is both a milder and a temporary alternative to Botox injections. This muscle-relaxing property of acetyl hexapeptide-8 targets the expression of fine lines such as crow's feet around the eyes, forehead and mouth while softening the appearance of wrinkles. These temporary effects diminish slowly once acetyl hexapeptide-8 is no longer applied to the skin.

How to use REPLY Day & Night Cream

- AM/PM - Massage into face and neck using upward and outward circular motion.
- For maximum benefits, cleanse with REPLY Oil to Foam Cleanser, mist with REPLY Essence/Toner and then moisturize with Day & Night Cream.

FAQs —

How many pumps do I apply of the Day & Night Cream?

Most individuals require only 1-2 pumps per application. If you have dry skin and require more hydration, we suggest applying a few more sprays from the Essence/Toner directly before applying the Day & Night Cream. If you have oily skin, we suggest only one pump per application. Each individual's skin is different and may require more or less.

Is REPLY safe to use on your skin during pregnancy?

Yes, REPLY skincare products can be used while pregnant or nursing. If sensitivity occurs, discontinue use.

Are REPLY products suitable to use for people with rosacea?

Yes, individuals with rosacea can use REPLY skincare products.

Does this product contain gluten since it contains barley seed extract?

No, barley seed extract does not contain gluten.

Will wasabi root extract burn my skin?

No, it should not cause a burning sensation or irritation. Wasabi root extract contains natural properties that may create a tingling or warming sensation on the skin. Of course, individual reactions can vary, so if irritation does occur, it is best to discontinue use.

Is acetyl hexapeptide-8 safe?

Yes, acetyl hexapeptide-8 is classified as GRAS (generally recognized as safe) by the U.S. Food and Drug Administration, meaning it is considered safe for use in cosmetics, having been extensively tested for safety and efficacy.
